Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-3 are rejected under 35 U.S.C. 103(a) as being unpatentable over Brown (U.S. 5940861) in view of Bonevento (U.S. 5170471).
3. Regarding claim 1, Brown teaches (fig. 6) a suspend packet transmitter comprising: a device status checking unit for checking whether or not a device connected with communication network fulfills suspend and resume function (fig. 11); a judging unit for judging, with reference to data in said device status checking unit, whether or not a device without suspend and resume state by means of function exists in a domain set in suspend state (fig. 11, 506) and a packet transmitting unit for transmitting a suspend packet when all devices are judged as devices with suspend and resume function in said judging unit (fig. 11, 508).
4. Brown does not explicitly teach inputted suspend device number and port number;
5. Bonevento teaches (fig. 18) suspend device number and port number. It would have been obvious to one of ordinary skill in the art to adapt this to Brown's system to specify a specific operation to which port (abstract).
6. Regarding claim 2, Bonevento teaches (fig. 12) the inputted port number of the inputted suspend device number corresponds to an output port for relaying the suspend packet, the

Art Unit: 2616

suspend packet is outputted even if there included in a domain to be suspended a device other than a device with suspend and resume function.

7. Regarding claim 3, Brown teaches (fig. 11) the device status checking unit checks whether or not each device is in active, wherein said judging unit judges whether or not any active device exists in the domain set in suspend state, and wherein said packet transmitting unit stops transmit a suspend packet when device exists in the domain.

Claim Rejections - 35 USC § 103

8. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

9. Claim 6 is rejected under 35 U.S.C. 103(a) as being unpatentable over Brown in view of Bonevento.

10. Brown and Bonevento do not teach the device with suspend and resume function fulfills IEEE1394a-2000 standard. However, it would have been obvious to one of ordinary skill in the art to adapt this to Brown and Bonevento's system, as it is well known in the art.

Art Unit: 2616

11. Claims 4 and 5 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
